Auxiliary output
12V

Heating

Connectivity

LIN BUS • CI-BUS ALDE/TRUMA • CAN BUS FUSION • CAN BUS SCHEIBER

Functions

The Energy Management Box is the ideal solution for equipments protection and electrical management for recreational vehicles, from pick-up to Liner.

This 12V all-in-one system gathers your entire installation in a single plug & play box (using automotive connectors) for fast installation and increased productivity. With this design, wiring is simplified.

Comfort

- 1 output with integrated dimmer
- Function «turn off everything» (12V general / lighting)
- Compatible with TRUMA & ALDE heating
- Compatible with Garmin GPS
- Compatible with Gel, AGM, lithium, lead-acid batteries
- Information if 230 VAC present
- Outdoor temperature display
(+ indoor if using a Navicolor, optional)

Safety

- Batteries and tanks monitoring
(Water, Waste Water - 5 levels of measurement)
- Power cut at low voltage

Energy Management

- Charging the batteries by the mains socket (charger 16A), solar panels (up to 2x100W) and the alternator.
- Charging / discharging of the Motor and Auxiliary batteries is managed by the integrated coupler-splitter.
- Possibility of installing 1 or 2 IBS sensors (Intelligent Battery Sensor) to monitor the status of auxiliary batteries.

Automatic functions while starting :

- Reentry of the running board
- Reentry of the Satellite Antena
- Extinction of the canopy lighting
- Inhibition of electric bed power supply

Emergency function

In case of power failure, the essential functions remain accessible thanks to the 3 by-pass fuses (25A) and the emergency button on the block.

- 1 Pump
- 2 Lighting
- 3 Electric bed
- 4 Emergency button for the reentry of the running board

The advantages of the solution

Compatible Ci-BUS

Product validated with our partners : Fusion/Garmin, Alde, Truma et Hella

Electrical protection

of each output by mini-fuse

Compatible communicating batteries

EZA and SuperB

Integrated charger

Charging curves adapted to the different batteries of the market (Lead, lithium, ...)

Plug&play

Time savings and wiring

IBS sensor

Reliability and accuracy of measurements (Voltage, current and temperature of the battery)

Options

- **IBS sensor**

Monitor your batteries with smart battery sensors (IBS sensor, derived from automotive technology) that reliably and accurately measure battery voltage, current and temperature.

- **CAN/USB interface**

Control your installation from a tablet with the CAN / USB interface.

- **Wifi Server**

Connect your motorhome with the Wifi Server. The Scheiber web app allows you to control functions from your smartphone or tablet.

- **Lighting**

Add 6 additional outputs with wired switches and create ambiances by zones thanks to the dimmer.

- **2.4Ghz gateway**

Add battery-free wireless switches to your lighting network and upgrade your installation easily. The installation is fast and avoids passing cables in the partitions.

- **Switches (wireless, battery-free) - 1-button switch / 2-button switch**

- **Indoor temperature sensor**

Touchscreens

BASIC

Navicolor PT2

The essentials at a low price

- 2.4" touchscreen
- product derived from sailing
- interchangeable frame

Available soon

Navicolor PT2 **AND/OR** Navicolor GT2

ADVANCED

Navicolor GT2

The best compromise

- 3.5" touchscreen
- Glass Touch flat surface
- ON/OFF button
- touch keys on the front (tank and batteries)
- set language, time / date format and temperature unit ° C / ° F

CAN cable

GARMIN Interface

Driving the entire motorhome

- 7" removable touchscreen
- Integrated GPS Fusion
- Integrated car stereo

Garmin cable

OPTION

ANDROID tablet

Connect the vehicle

- Scheiber motorhome application for driving equipment
- all the comfort of your personal tablet (applications, internet browser, ...)

USB cable

AN/USB interface **OR** Wifi Server

CAN cable
